

**ABSTRACT OF THE DISCLOSURE**

A miniature automated teller machine comprising a housing having a front keypad and a rear keypad. The front and rear keypads are connected to the housing. The front keypad has a front screen attached to the front keypad, and the rear keypad has a rear screen attached to the rear keypad. A door is hingedly connected to the housing. The rear screen allows an operator of the machine to perform management functions without the management functions being viewed on the front screen by a user of the machine.
